Coverage: 350 - 400 sq ft/gal @ 4 mils wet; 1.8 mils dry

Drying Time. @ 77°F, 50% RH:
Temperature and humidity dependent
- Touch: 1 hour
- Recoat: 4 hours

Drying and recoat times are temperature, humidity, and film thickness dependent

Finish: 25-30 units @ 85°
0-5 units @ 60°

Flash Point: N/A

Tinting with CCE only:
Base oz/gal Strength
- High Ref White 0-5 100%
- Extra White 0-6 125%
- Deep Base 4-14 125%
- Ultradeep 4-12 100%
- Real Red 4-12 100%
- Bright Yellow 4-12 100%

Vehicle Type: Vinyl Acrylic

SPECIFICATIONS

Block
1ct. PrepRite Block Filler*
2cts. ProMar 200 Zero VOC Interior Latex

Drywall
1ct. ProMar 200 Zero VOC Latex Primer
2cts. ProMar 200 Zero VOC Interior Latex

Masonry
1ct. Loxon Concrete & Masonry Primer*
2cts. ProMar 200 Zero VOC Interior Latex

Plaster
1ct. Premium Wall & Wood Primer*
2cts. ProMar 200 Zero VOC Interior Latex

Wood
1ct. Premium Wall & Wood Primer*
2cts. ProMar 200 Zero VOC Interior Latex

* These primers contain <50 g/L VOC.
Other primers may be appropriate.

When repainting involves a drastic color change, a coat of primer will improve the hiding performance of the topcoat color.

SURFACE PREPARATION

WARNING! Removal of old paint by sanding, scraping or other means may generate dust or fumes that contain lead. Exposure to lead dust or fumes may cause brain damage or other adverse health effects, especially in children or pregnant women. Controlling exposure to lead or other hazardous substances requires the use of proper protective equipment, such as a properly fitted respirator (NIOSH approved) and proper containment and cleanup. For more information, call the National Lead Information Center at 1-800-424-LEAD (in US) or contact your local health authority.

Remove all surface contamination by washing with an appropriate cleaner, rinse thoroughly and allow to dry. Existing peeled or checked paint should be scraped and sanded to a sound surface. Glossy surfaces should be sanded dull. Stains from water, smoke, ink, pencil, grease, etc. should be sealed with the appropriate primer/sealer. Recognize that any surface preparation short of total removal of the old coating may compromise the service length of the system.

Drywall
Fill cracks and holes with patching paste/spackle and sand smooth. Joint compounds must be cured and sanded smooth. Remove all sanding dust.

Masonry, Concrete, Cement, Block
All new surfaces must be cured according to the supplier’s recommendations—usually about 30 days. Remove all form release and curing agents. Rough surfaces can be filled to provide a smooth surface. If painting cannot wait 30 days, allow the surface to cure 7 days and prime the surface with Loxon Concrete & Masonry Primer.
**SURFACE PREPARATION**

**Plaster**
Bare plaster must be cured and hard. Textured, soft, porous, or powdery plaster should be treated with a solution of 1 pint household vinegar to 1 gallon of water. Repeat until the surface is hard, rinse with clear water and allow to dry.

**Wood**
Sand any exposed wood to a fresh surface. Patch all holes and imperfections with a wood filler or putty and sand smooth.

**Mildew**
Prior to attempting to remove mildew, it is always recommended to test any cleaner on a small, inconspicuous area prior to use. Bleach and bleaching type cleaners may damage or discolor existing paint films. Bleach alternative cleaning solutions may be advised. Mildew may be removed before painting by washing with a solution of 1 part liquid bleach and 3 parts water. Apply the solution and scrub the mildewed area. Allow the solution to remain on the surface for 10 minutes. Rinse thoroughly with water and allow the surface to dry before painting. Wear protective eyewear, waterproof gloves, and protective clothing. Quickly wash off any of the mixture that comes in contact with your skin. Do not add detergents or ammonia to the bleach/water solution.

**Caulking**
Gaps between walls, ceilings, crown moldings, and other interior trim can be filled with the appropriate caulk after priming the surface.

**APPLICATION**

**Apply at temperatures above 50°F.**
No reduction needed.

**Brush**
Use a nylon/polyester brush.

**Roller**
Use a 3/8" - 3/4" nap synthetic cover.

**Spray—Airless**
Pressure: 2000 psi
Tip: .017"-.021"

**APPLICATION TIPS**

Make sure product is completely agitated (mechanically or manually) before use.

Priming and application of two coats at the recommended film thickness can help where hiding of a previous coating or application to new drywall is a factor.

Using the same method of application and batch to touch up with as that originally used will help improve touch up.

When original application was by spray, preconditioning of touch up paint by running it through the spray tip will help touch up appearance.

**CAUTIONS**

For interior use only.
Protect from freezing.
Non-photochemically reactive.

Before using, carefully read **CAUTIONS** on label

**CLEANUP INFORMATION**

Clean spills, spatters, hands and tools immediately after use with soap and warm water. After cleaning, flush spray equipment with compliant cleanup solvent to prevent rusting of the equipment. Follow manufacturer's safety recommendations when using solvents.
