**CHARACTERISTICS**

ProMar Exterior Solid Color Acrylic Latex Stain is ideal for use on properly prepared, vertical wood, rough sawn lumber, textured or abraded plywood, siding shakes, and siding shingles. May also be used on adjacent masonry and metal surfaces.

**Features:**
- 100% Acrylic
- Fast Application and Drying
- Good Penetration

**Use on:**
- Tract Housing
- Commercial Properties
- Apartments

**Color:** Solid Stain Colors
A sample brushout is recommended to ensure color satisfaction. Surface may darken slightly with application.

**Coverage:**
- 200-400 sq ft/gal
- @ 4-8 mils wet; 1.2 - 2.5 mils dry

Depending on porosity and texture.

**Drying Time, @ 77°F, 50% RH:**
- Touch: 1 hour
- Recoat: 4 hours

Drying and recoat times are temperature, humidity, and film thickness dependent.

**Finish:**
- 0-5 units @ 85°

Tinting with CCE:
- Base | oz/gal | Strength |
- Extra White | 0-6 | SherColor |
- Deep Base | 4-12 | SherColor |
- Ultradeep Base | 10-12 | SherColor |

**Extra White A16W00351**
(may vary by base)

**VOC (less exempt solvents):**
- 79 g/L; 0.66 lb/gal

**Volume Solids:**
- 31 ± 2%

**Weight Solids:**
- 47 ± 2%

**Weight per Gallon:**
- 10.67 lb

**Flash Point:**
- N/A

**Vehicle Type:**
- Acrylic

**Mildew Resistant**
This coating contains agents that inhibit the growth of mildew on the surface of this coating.

---

**SPECIFICATIONS**

- **Aluminum & Aluminum Siding**
  - 2cts. ProMar Exterior Solid Color Stain Block
  - 1ct. PrepRite Block Filler
  - 2cts. ProMar Exterior Solid Color Stain

- **Galvanized Steel**
  - 1ct. All Surface Enamel Latex Primer
  - 2cts. ProMar Exterior Solid Color Stain

- **Masonry**
  - 1ct. Loxon Concrete & Masonry Primer
  - 2cts. ProMar Exterior Solid Color Stain

- **Bleeding Woods, Abraded Plywood, and Composition Board**
  - 1ct. Exterior Oil-Based Primer
  - 2cts. ProMar Exterior Solid Color Stain

- **Other Woods — self-priming**
  - 2cts. ProMar Exterior Solid Color Stain

Due to the wide variety of wood species and their properties, a test sample should be applied to ensure adhesion, compatibility and performance prior to full scale application.

**Plywood — self-priming**
- 2cts. ProMar Exterior Solid Color Stain

**SURFACE PREPARATION**

**WARNING!** Removal of old paint by sanding, scraping or other means may generate dust or fumes that contain lead. Exposure to lead dust or fumes may cause brain damage or other adverse health effects, especially in children or pregnant women. Controlling exposure to lead or other hazardous substances requires the use of proper protective equipment, such as a properly fitted respirator (NIOSH approved) and proper containment and cleanup. For more information, call the National Lead Information Center at 1-800-424-LEAD (in US) or contact your local health authority.

Remove all surface contamination by washing with an appropriate cleaner, rinse thoroughly and allow to dry.

Existing peeled or checked paint should be scraped and sanded to a sound surface. Glossy surfaces should be sanded dull. Stains from water, smoke, ink, pencil, grease, etc. should be sealed with the appropriate primer/sealer. Test the absorbency of the wood by sprinkling water on the surface. If the water penetrates into the wood quickly, the wood is ready to finish. If the water beads up or does not penetrate, allow the wood to weather and test for absorbency again.

Recognize that any surface preparation short of total removal of the old coating may compromise the service length of the system.

**Aluminum and Galvanized Steel**
Remove any oil, grease, or other surface contamination. Remove all corrosion with sandpaper, wire brush, or other abrading method. Prime as needed.

**Caulking**
Gaps between walls, ceilings, crown moldings, and other interior trim can be filled with the appropriate caulk after priming the surface.

## SURFACE PREPARATION

**Masonry, Concrete, Cement, Stucco**

All new surfaces must be cured according to the supplier’s recommendations—usually about 30 days. Remove all form release and curing agents. Rough surfaces can be filled to provide a smooth surface. Remove any loose stucco, efflorescence, or laitance. Allow new stucco to cure at least 30 days before painting. If painting cannot wait 30 days, allow the surface to cure 7 days and prime the surface with Loxon Concrete & Masonry Primer. Repair cracks, voids, and other holes using an elastomeric patch or sealant.

**Mill Glaze** is a glossy finish on new, smooth sawn wood or on the peaks of some textured wood. Remove this by sanding to allow the stain to penetrate.

**Mildew**

Prior to attempting to remove mildew, it is always recommended to test any cleaner on a small, inconspicuous area prior to use. Bleach and bleaching type cleaners may damage or discolor existing paint films. Bleach alternative cleaning solutions may be advised. Mildew may be removed before painting by washing with a solution of 1 part liquid bleach and 3 parts water. Apply the solution and scrub the mildewed area. Allow the solution to remain on the surface for 10 minutes. Rinse thoroughly with water and allow the surface to dry before painting. Wear protective eyewear, waterproof gloves, and protective clothing. Quickly wash off any of the mixture that comes in contact with your skin. Do not add detergents or ammonia to the bleach/water solution.

**Smooth or Rough Wood Siding and Plywood.**

Sand any exposed, weathered wood to a fresh surface. Replace any deteriorated wood. Some woods, such as redwood and cedar, contain a high amount of tannin, a colored wood extract. This product may show tannin discoloration bleed, in severe cases and at some knots, a coat of Exterior Oil-Based Wood Primer may be needed prior to staining.

**Pressure Treated Wood**

Test the absorbency of the wood by sprinkling water on the surface. If the water penetrates into the wood quickly, the wood is ready to finish. If the water beads up or does not penetrate, allow the wood to weather several weeks and test for absorbency again. Prepare the surface like any other wood surface.

## APPLICATION

**Apply at temperatures above 50°F. No reduction necessary.**

**Brush**

Use a nylon/polyester brush, or appropriate stain applicator.

**Roller**

Use a ½” - 1” nap synthetic roller cover.

**Spray—Airless**

Pressure ....................... 1800-2400 psi
Tip .....................................  .013”-.021”

### Tips

Stains tend to lap (dark lines where two freshly coated areas overlap). These tips will help avoid lap marks and keep the appearance uniform:

- Do not stain in direct sun or on a hot surface.
- Stain from a dry area into the adjoining wet stain area.
- Keep the leading edge wet and distribute the finish evenly.
- Use natural breaks as boundaries to divide large areas into smaller, more manageable ones.
- Stain a board from end to end.
- Use two coats on badly weathered or unfinished wood.
- Maintenance clean by using a non chlorinated bleach alternative
- Always apply product to a small test area and allow to dry completely before coating the entire project to ensure desired color and appearance

## CAUTIONS

Protect from freezing.

- Non-photochemically reactive.
- For exterior use only.
- For vertical surfaces only.
- Not for use on roofs, decks, or other surfaces where water will accumulate.
- For wood decks and patios, use SuperDeck Solid Color Deck Stain.

Before using, carefully read **CAUTIONS** on label.

## CLEANUP INFORMATION

Clean spills, spatters, hands and tools immediately after use with soap and warm water. After cleaning, flush spray equipment with compliant cleanup solvent to prevent rusting of the equipment. Follow manufacturer’s safety recommendations when using solvents.
