**SUPERDECK®**  
Exterior Oil-Based Transparent Stain  
SD2-60 Series

### DESCRIPTION

- A high solids penetrating exterior formula that protects the beauty of wood with a rich transparent stain
- One coat only coverage with a transparent finish that highlights the wood grain
- 3-Oil formula contains deep penetrating tung oil for lasting protection
- Quality iron oxide pigments to create lasting colors and inhibit UV damage caused by the sun
- Excellent water repellency
- Formulated to resist growth of mildew and algae on the coating’s surface

**Use on wood:**  Use on:
- Decks
- Doors
- Siding
- Fences
- Shutters
- Shakes
- Outdoor wood
- Furniture

**Use on:**
- Pressure treated wood
- Cedar
- Redwood
- Pine
- Plywood
- Oak

**Tips:** Stains tend to lap (dark lines where two freshly coated areas overlap). These tips will help avoid lap marks and keep the appearance uniform:
- **Do not apply more than one coat**
- Do not stain in direct sun or on a hot surface. Stain from a dry area into the adjoining wet stain area
- Keep the leading edge wet and distribute the finish evenly
- Quickly remove puddles and excess material by redistributing to dry areas or wiping up. Excess product allowed to sit on surface will result in a tacky finish
- Use natural breaks as boundaries to divide large areas into smaller, more manageable ones
- Stain a board from end to end
- Different wood species, textures and natural color will affect finished shade
- Always test a small area first for color satisfaction before coating the entire project

### CHARACTERISTICS

**Color:** Transparent Stain colors

A sample brushout is recommended to ensure color satisfaction.
- Heart Redwood SD2R00065
- Canyon Brown SD2N00067
- Redwood SD2R00063
- Cedar Tone SD2Y00061
- Natural SD2C00064

**Coverage:**
- Smooth Wood 250-350 sq ft/gal
- Rough Sawn Lumber 150-250 sq ft/gal

Depending on porosity and texture

Note: New wood normally requires less product than old, weathered wood. This is due to older wood being more porous than newer wood.

**Drying Time, @ 77°F, 50% RH**
- To touch: 8 hours
- To use: 24 hours

Drying and recoat times are temperature, humidity, and film thickness dependent

Due to the composition of SuperDeck Oil-Based Transparent, do not apply more than one coat.

**Flash Point:** 111°F, PMCC

**Finish:** slight sheen

**Tinting:** Ready mix colors. Do Not Tint

**Vehicle Type:** alkyd

**Cedar Tone SD2Y00061**

(may vary by color)

**VOC (less exempt solvents):** 89 g/L; .74 lb/gal

As per 40 CFR 59.406 and SOR/2009-264, s.12

**Volume Solids:** 81 ± 2%  
**Weight Solids:** 79 ± 2%  
**Weight per Gallon:** 7.77 lb

### SURFACE PREPARATION

**WARNING!** Removal of old coatings by sanding, scraping or other means may generate dust or fumes that contain lead. Exposure to lead dust or fumes may cause brain damage or other adverse health effects, especially in children or pregnant women. Controlling exposure to lead or other hazardous substances requires the use of proper protective equipment, such as a properly fitted respirator (NIOSH approved) and proper containment and cleanup. For more information, call the National Lead Information Center at 1-800-424-LEAD (in US) or contact your local health authority.

All surfaces must be clean, dry, and free from dirt, mildew stains, dust and other foreign matter. Do not apply over sealed surfaces. Recognize that any surface preparation short of total removal of the old coating will compromise the service length of the system.

Clean all surfaces completely with the appropriate cleaner based on the conditions.

**SuperDeck Deck Wash**  
Mildew stain, Algae stain  
Weathered wood (bleaches wood)  
Gray wood (bleaches wood)

**SuperDeck Revive™**  
Tannin Bleed, Nail stain  
Weathered wood (restores color)  
Gray wood (restores color), Mill Glaze

**SuperDeck Stain & Sealer Remover**  
Weathered, gray wood  
Old Paint & Stain

Carefully follow all label instructions. Thoroughly rinse the surface to remove all residue and allow to thoroughly dry before coating.

To determine if the surface is sealed, test the absorbency of the wood by sprinkling water on the surface. If the water penetrates into the wood quickly, the wood is ready to finish. If the water beads up or does not penetrate, allow the wood to weather 1 to 2 weeks and test for absorbency again.

**APPLICATION**

Thoroughly stir contents before and occasionally during use. For uniformity, mix all cans together before use. Do not thin or mix with any other stains or coatings.

Only apply one coat without thinning by brush, roller, or spray. If sprayed, use the lowest possible pressure needed for a reasonable spray pattern. Also, when spraying be sure to “back brush/roll”. Back brushing/rolling is suggested when spraying, working the product smoothly and evenly into the wood. This will decrease the possibility of pools or puddles on the surface and ensure a properly penetrated finish.

Penetration will vary depending on porosity and water content of the surface. Thoroughly coat end and joints.

For best results apply in shade with surface temperatures between 40°F and 90°F. Do not apply if temperatures will fall below 40°F or if rain is expected within 24 hours after application. Cooler temperatures require longer drying times.
