**ALL SURFACE ENAMEL**

**Interior/Exterior Latex**

**High Gloss**
- A41W01251 Extra White
- A41W01253 Deep Base
- A41T01254 Ultradeep Base
- A41R01238 Safety Red
- A41Y01237 Safety Yellow
- A41B01200 Black

---

**CHARACTERISTICS**

*All Surface Enamel* is designed for use on interior and exterior wood, metal, drywall, and other surfaces.

This high quality coating provides excellent resistance to weather and sunlight, maintaining its gloss and color. The exceptional durability allows it to be used on doors, trim, windows, and other hard wear areas.

**Interior & Exterior for use on these surfaces:**
- Wood
- Aluminum
- Drywall
- Steel
- Galvanized
- Masonry
- Concrete
- Cement
- Plaster

**Topcoat**

- Color: Many Colors
- Coverage: 350 - 400 sq ft/gal
  - @ 4.0 mils wet; 1.6 mils dry
- Drying Time, @ 77°F, 50% RH:
  - Touch: 1 hour
  - Recoat: 4 hours
- Flash Point: N/A
- Finish: 70 units @ 60°

**Tinting with CCE:**

**SURFACE PREPARATION**

**WARNING!** Removal of old paint by sanding, scraping or other means may generate dust or fumes that contain lead. Exposure to lead dust or fumes may cause brain damage or other adverse health effects, especially in children or pregnant women. Controlling exposure to lead or other hazardous substances requires the use of proper protective equipment, such as a properly fitted respirator (NIOSH approved) and proper containment and cleanup. For more information, call the National Lead Information Center at 1-800-424-LEAD (in US) or contact your local health authority.

Remove all surface contamination by washing with an appropriate cleaner, rinse thoroughly and allow to dry. Existing peeled or checked paint should be scraped and sanded to a sound surface. Glossy surfaces should be sanded dull. Stains from water, smoke, ink, pencil, grease, etc. should be sealed with an appropriate primer/sealer. Recognize that any surface preparation short of total removal of the old coating may compromise the service length of the system.

**Aluminum and Galvanized Steel**

Wash to remove any oil, grease, or other surface contamination using a water based cleaner-degreaser. Remove all corrosion with sandpaper, wire brush or other abrading method.

**Drywall**

Fill cracks and holes with patching paste/spackle and sand smooth. Joint compounds must be cured and sanded smooth. Remove all sanding dust.
**SURFACE PREPARATION**

**Masonry, Concrete, Cement, Block**
All new surfaces must be cured according to the supplier’s recommendations—usually about 30 days. Remove all form release and curing agents. Rough surfaces can be filled to provide a smooth surface. If painting cannot wait 30 days, allow the surface to cure 7 days and prime the surface with Loxon Concrete and Masonry Primer.

**Plaster**
Bare plaster must be cured and hard. Textured, soft, porous, or powdery plaster should be treated with a solution of 1 pint household vinegar to 1 gallon of water. Repeat until the surface is hard, rinse with clear water and allow to dry.

**Steel**
Rust and mill scale must be removed using sandpaper, wire brush or other abrading method. Bare steel must be primed the same day as cleaned.

**Wood**
Sand any exposed wood to a fresh surface. Patch all holes and imperfections with a wood filler or putty and sand smooth.

**Mildew**
Prior to attempting to remove mildew, it is always recommended to test any cleaner on a small, inconspicuous area prior to use. Bleach and bleaching type cleaners may damage or discolor existing paint films. Bleach alternative cleaning solutions may be advised. Mildew may be removed before painting by washing with a solution of 1 part liquid bleach and 3 parts water. Apply the solution and scrub the mildewed area. Allow the solution to remain on the surface for 10 minutes. Rinse thoroughly with water and allow the surface to dry before painting. Wear protective eyewear, waterproof gloves, and protective clothing. Quickly wash off any of the mixture that comes in contact with your skin. Do not add detergents or ammonia to the bleach/water solution.

**SURFACE PREPARATION**

**Caulking**
Exterior gaps between windows, doors, trim, and other through-wall openings; and interior gaps between walls, ceilings, crown moldings, and other trim can be filled with the appropriate caulk after priming the surface.

**APPLICATION**

Apply at temperatures above 50°F. No reduction necessary.

**Brush**
Use a nylon/polyester brush

**Roller**
Use a 1/4" -3/4 " nap synthetic cover

**Spray—Airless**
Pressure ..............................1500 psi
Tip..................................017" - .021"

**CLEANUP INFORMATION**

Clean spills, spatters, hands and tools immediately with soap and warm water. Flush spray equipment after cleaning with compliant cleanup solvent to prevent rusting of the equipment. Follow manufacturer’s safety recommendations when using solvents.

**CAUTIONS**

Protect from freezing.
Not for use on roofs, floors, or decks.
Do not use colorants formulated for interior use only on exterior surfaces.

Before using, carefully read **CAUTIONS** on label.
