Solo Satin Interior/Exterior

**SPECIFICATIONS**

Apply 2 topcoats of Solo Satin directly over existing properly prepared, interior or exterior coatings. New interior bare drywall, cured plaster & masonry (cured with a pH of less than 10), and non-bleeding wood, prime with appropriate primer.

**Interior**

- Drywall: 1 ct. ProMar 200 Zero VOC Primer
- Plaster: 1 ct. Premium Wall & Wood Primer
- Wood: 1 ct. Premium Wall & Wood Primer

**Interior & Exterior**

- Aluminum & Galvanized Steel: 1 ct. Pro Industrial Pro-Cryl Primer
- Masonry, Cement, Stucco: 1 ct. Loxon Concrete & Masonry Primer
- Steel: 1 ct. Pro Industrial Pro-Cryl Primer

**Exterior**

- Wood, Composition Board: 1 ct. Exterior Oil-Based Wood Primer or Exterior Latex Wood Primer
- Plywood: 1 ct. Exterior Latex Wood Primer
- Other primers may be appropriate.

When repainting involves a drastic color change, a coat of primer will improve the hiding performance of the topcoat color.

Application on exterior surfaces should be limited to trim, doors and shutters. This product is not ideal for whole house painting.

**SURFACE PREPARATION**

**WARNING!** Removal of old paint by sanding, scraping or other means may generate dust or fumes that contain lead. Exposure to lead dust or fumes may cause brain damage or other adverse health effects, especially in children or pregnant women. Controlling exposure to lead or other hazardous substances requires the use of proper protective equipment, such as a properly fitted respirator (NIOSH approved) and proper containment and cleanup. For more information, call the National Lead Information Center at 1-800-424-LEAD (in US) or contact your local health authority.

Remove all surface contamination by washing with an appropriate cleaner, rinse thoroughly and allow to dry. Existing peeled or checked paint should be scraped and sanded to a sound surface. Glossy surfaces should be sanded dull. Stains from water, smoke, ink, pencil, grease, etc. should be sealed with the appropriate primer/sealer. Recognize that any surface preparation short of total removal of the old coating may compromise the service length of the system.

**Aluminum, Galvanized Steel & Steel**

Wash to remove any oil, grease, or other surface contamination. All corrosion must be removed with sandpaper, wire brush, or other abrading method. Primer with Pro Industrial Pro-Cryl Primer.

**Masonry, Concrete, Block**

All new surfaces must be cured according to the supplier’s recommendations usually about 30 days. Remove all form release and curing agents. Rough surfaces can be filled to provide a smooth surface. If painting cannot wait 30 days, allow the surface to cure 7 days and prime the surface with Loxon Concrete & Masonry Primer/Sealer. Cracks, voids, and other holes should be repaired with an elastomeric patch or sealant.
**SURFACE PREPARATION**

**Drywall** - Fill cracks and holes with patching paste or spackle and sand smooth. Joint compounds must be cured and sanded smooth. Remove all sanding dust.

**Plaster** - All new surfaces must be cured at least 7 days. Textured, soft, porous, or powdery plaster should be treated with a solution of 1 pint household vinegar to 1 gallon of water. Repeat until the surface is hard, rinse with clear water and allow to dry.

**Wood** - Clean the surface thoroughly then sand any exposed wood to a fresh surface. Patch all holes and imperfections with a wood filler or putty and sand smooth. Prime with appropriate primer. **Exterior**: Knots and some woods, such as redwood and cedar, contain a high amount of tannin, a colored wood extract. If applied to these bare woods, it may show some staining. If staining persists, spot prime severe areas with 1 coat of Exterior Oil-Based Wood Primer prior to using.

**Mildew** - Prior to attempting to remove mildew, it is always recommended to test any cleaner on a small, inconspicuous area prior to use. Bleach and bleaching type cleaners may damage or discolor existing paint films. Bleach alternative cleaning solutions may be advised. Remove before painting by washing with a solution of 1 part liquid bleach and 3 parts water. Apply the solution and scrub the mildewed area. Allow the solution to remain on the surface for 10 minutes. Rinse thoroughly with water and allow the surface to dry before painting. Wear protective eyewear, waterproof gloves, and protective clothing. Quickly wash off any of the mixture that comes in contact with your skin. Do not add detergents or ammonia to the bleach/water solution.

**Caulking** - Gaps between walls, ceilings, crown moldings, and other interior trim can be filled with the appropriate caulk after priming the surface.

**APPLICATION**

Apply at temperatures above 50°F. No reduction needed.

**Brush**

Use a nylon/polyester brush.

**Roller**

Use a 3/8” - 3/4” nap soft woven cover.

**Spray—Airless**

Pressure: 2000 psi
Tip: .013”-.015”
Reduction: No reduction needed

**CLEANUP INFORMATION**

Clean spills, spatters, hands and tools immediately with soap and warm water. After cleaning, flush spray equipment with compliant clean up solvent to prevent rusting of the equipment. Follow manufacturer’s safety recommendations when using solvents. Do not pour unused contents down the drain. Consult with local authorities for method of disposal and recycling.

**CAUTIONS**

Non-photochemically reactive.
Protect from freezing.

Before using, carefully read CAUTIONS on label.

**SURFACE PREPARATION**

Drywall - Fill cracks and holes with patching paste or spackle and sand smooth. Joint compounds must be cured and sanded smooth. Remove all sanding dust.

Plaster - All new surfaces must be cured at least 7 days. Textured, soft, porous, or powdery plaster should be treated with a solution of 1 pint household vinegar to 1 gallon of water. Repeat until the surface is hard, rinse with clear water and allow to dry.

Wood - Clean the surface thoroughly then sand any exposed wood to a fresh surface. Patch all holes and imperfections with a wood filler or putty and sand smooth. Prime with appropriate primer. **Exterior**: Knots and some woods, such as redwood and cedar, contain a high amount of tannin, a colored wood extract. If applied to these bare woods, it may show some staining. If staining persists, spot prime severe areas with 1 coat of Exterior Oil-Based Wood Primer prior to using.

Mildew - Prior to attempting to remove mildew, it is always recommended to test any cleaner on a small, inconspicuous area prior to use. Bleach and bleaching type cleaners may damage or discolor existing paint films. Bleach alternative cleaning solutions may be advised. Remove before painting by washing with a solution of 1 part liquid bleach and 3 parts water. Apply the solution and scrub the mildewed area. Allow the solution to remain on the surface for 10 minutes. Rinse thoroughly with water and allow the surface to dry before painting. Wear protective eyewear, waterproof gloves, and protective clothing. Quickly wash off any of the mixture that comes in contact with your skin. Do not add detergents or ammonia to the bleach/water solution.

Caulking - Gaps between walls, ceilings, crown moldings, and other interior trim can be filled with the appropriate caulk after priming the surface.
