CARPENTERS WOOD FILLER

PREPARATION & USE
Surface must be clean, dry, free of oil, grease, and loose particles. Use directly from container at 40°F or above. Remove excess with putty knife, leaving enough to sand flush with surface.
Shallow repairs: apply once, let stand 15 minutes, then sand.
Deep repairs: apply two or more times, letting dry before next layer is applied - total drying time 1-8 hours.
Staining: For best results, sand with medium or coarse grain paper. FOR TRUE STAIN MATCH, do a test area on a scrap piece of wood with filler to see stain color for both filler and wood. Due to porosity of some wood, the filled area may need to be blended in to match surrounding wood grain.

PRIMING: For best results, it is always recommended to prime C-86 Filler prior to topcoating with paint. For professional results and to prevent flashing, prime entire surface (ceiling, walls, door, etc.) with a stain blocking primer prior to finishing coat. Spot priming (patched area only) or no priming at all can result in flashing or reverse flashing (shiners).

PAINTING: When dry, C-86 can be topcoated with most commonly used paint systems.

CLEAN UP: Replace lid tightly after use. Wash tools and hands with water before filler dries.

LIMITATIONS
Sherwin-Williams Carpenter’s Wood Filler C-86 is recommended for interior use only. Avoid high speed machine sanding, use the on/off method.
Protect from freezing.
SHELF LIFE: Sherwin-Williams C-86 Carpenter’s Wood Filler exhibits a 12 month shelf life from date of manufacture when stored at room temperature.

PRECAUTIONS
Do not take internally; keep out of the reach of children.
