Sher-Cryl™ HPA
High Performance Acrylic

B66R00308 Gloss Primary Red, B66Y00307 Gloss Vivid Yellow,
B66R00358 Semi-Gloss Primary Red, B66Y00357 Semi-Gloss Vivid Yellow

**CHARACTERISTICS**

Sher-Cryl HPA is a higher performing ambient cured, one component acrylic coating with excellent performance properties.

**Features:**
- Chemical Resistant
- Outstanding humidity resistance
- Fast dry
- Outstanding application characteristics
- Suitable for use in USDA inspected facilities

**Recommended for use in:**
- Buildings & Warehouses
- Equipment & Machinery
- Storage Tanks & Piping & Structural Steel
- Manufacturing Facilities & New Construction
- Interior or Exterior

For use on properly prepared:
Steel, Galvanized & Aluminum, Concrete and Masonry, Wood, Previously Painted & Zinc rich primers

**Finish:**
- 70°±@60° Gloss
- 35-45°@60° Semi-Gloss

**Color:**
- Primary Red, Vivid Yellow bases

**Recommended Spreading Rate per coat:**
- Gloss Primary Red B66R00308 (may vary by base)
  - Wet mils: 6.0-10.0
  - Dry mils: 2.2-3.7
  - Coverage: 160-269 sq.ft. per gallon

**Theoretical Coverage:**
- 593 sq.ft. per gallon
  - @ 1 mil dry

**Approximate spreading rates are calculated on volume solids and do not include any application loss.**

**Note:** Brush or roll application may require multiple coats to achieve maximum film thickness and uniformity of appearance.

**Drying Schedule @ 7.0 mils wet, @ 50% RH:**
- Drying, and recoat times are temperature, humidity, and film thickness dependent.
- To touch: 1 hour 30 minutes
- To handle: 2 hours
- To recoat: 2 hours 1 hour
- To cure: 30 days 30 days

**Tinting with CCE only:**
- Base
  - oz. per gallon: Strength
  - Primary Red: 0-12 SherColor
  - Vivid Yellow: 0-14 SherColor

**Gloss Primary Red B66R00308** (may vary by color)

**V.O.C. (less exempt solvents):**
- less than 50 grams per litre; 0.42 lbs. per gallon
  - As per 40 CFR 59.408
  - Volume Solids: 37 ± 2%
  - Weight Solids: 40 ± 2%
  - Weight per Gallon: 8.65 lb

**Flash Point:**
- N/A

**Vehicle Type:**
- Acrylic

**Shelf Life:**
- 36 months, unopened

**COMPLIANCE**

As of 02/19/2020, Complies with:

- OTC
- OTC Phase II
- LEED® v4 & v4.1 Emissions
- Canada
- LEED® v4 & v4.1 V.O.C.
- EPD-NSF® Certified
- MIR-Product Lens Certified
- MPI

**APPLICATION**

**Temperature:**
- minimum 50°F / 10°C
- maximum 110°F / 43°C

**Relative humidity:**
- At least 5°F above dew point
- 85% maximum

The following is a guide. Changes in pressures and tip sizes may be needed for proper spray characteristics.

Always purge spray equipment before use with listed reducer. Any reduction must be compatible with the existing environmental and application conditions.

**Reducer:** Not recommended

**Airless Spray:**
- Pressure: 1500 p.s.i.
- Hose: 1/4 inch I.D.
- Tip: .017 - .021 inch
- Filter: 60 mesh

**Conventional Spray:**
- Gun: Binks 95
- Fluid Nozzle: 66
- Air Nozzle: 63 PB
- Atomization Pressure: 50 p.s.i.
- Fluid Pressure: 15-20 p.s.i.
- Brush: Nylon-polyester
- Roller Cover: 3/8 inch woven

If specific application equipment is listed above, equivalent equipment may be substituted.

Apply paint at the recommended film thickness and spreading rate as indicated on front page. Application of coating above maximum or below minimum recommended spreading rate may adversely affect coating performance. Spreading rates are calculated on volume solids and do not include an application loss factor due to surface profile, roughness, or porosity of the surface, skill, and technique of the applicator, method of application, various surface irregularities, material lost during mixing, spillage, over thinning, climatic conditions, and excessive film build.

Application temperature below 50°F (10°C) may cause poor adhesion and lengthen the drying and curing time.

Mix paint thoroughly to a uniform consistency with slow speed power agitation prior to use.

Striped coat crevices, welds, and sharp angles to prevent early failure in these areas. When using spray application, use a 50% overlap with each pass of the gun to avoid holidays, bare areas, and pinholes. If necessary, cross spray at a right angle.

During the early stages of drying, the coating is sensitive to rain, dew, high humidity and moisture condensation. Plan painting schedules to avoid these influences during the first 24 hours of curing.

**SPECIFICATIONS**

**Steel:**
- 1 coat Pro Industrial Pro-Cryl Primer
- or Pro Industrial DTM Primer/Finish
- or Kem Bonds HS
- or Zinc Clad XI
- 2 coats Sher-Cryl HPA

**Aluminum:**
- 2 coats Sher-Cryl HPA

**Aluminum (Water Based Primer):**
- 1 coat Pro Industrial Pro-Cryl Primer
- 2 coats Sher-Cryl HPA

**Concrete Block (CMU):**
- 1 coat Pro Industrial Heavy Duty Blockfiller
- or Loxon Acrylic Block Surfacer
- 2 coats Sher-Cryl HPA

**Concrete-Masonry:**
- 1 coat Loxon Concrete & Masonry Primer
- or Loxon Conditioner
- 2 coats Sher-Cryl HPA

**Drywall:**
- 1 coat ProMar 200 Zero V.O.C. Primer
- 2 coats Sher-Cryl HPA

**Galvanizing:**
- 2 coats Sher-Cryl HPA

**Pre-Finished Siding:** (Baked-on finishes)
- 1 coat DTM Bonding Primer
- 2 coats Sher-Cryl HPA

**Previously Painted:**
- 2 coats Sher-Cryl HPA

**Wood, exterior:**
- 1 coat Exterior Wood Primer
- 2 coats Sher-Cryl HPA

**Wood, interior:**
- 1 coat Premium Wall & Wood Primer
- 2 coats Sher-Cryl HPA

**Chrome base colors require a prime coat for maximum durability, adhesion, and corrosion protection. Application of coating on unprimed bare steel may cause pinpoint rusting.**

The systems listed above are representative of the product’s use, other systems may be appropriate. Other primers may be appropriate.
SURFACE PREPARATION

WARNING! Removal of old paint by sanding, scraping or other means may generate dust or fumes that contain lead. Exposure to lead dust or fumes may cause brain damage or other adverse health effects, especially in children or pregnant women. Controlling exposure to lead or other hazardous substances requires the use of proper protective equipment, such as a properly fitted respirator (NIOSH approved) and proper containment and cleanup. For more information, call the National Lead Information Center at 1-800-424-LEAD (in US) or contact your local health authority.

When cleaning the surface per SSPC-SP1, use only an emulsifying industrial detergent, followed by a water rinse. Do not use hydrocarbon solvents for cleaning.

Remove all surface contamination by washing with an appropriate cleaner, rinse thoroughly and allow to dry. Existing peeled or checked paint should be scraped and sanded to a sound surface. Glossy surfaces should be sanded dull. Stains from water, smoke, ink, pencil, grease, etc. should be sealed with the appropriate primer/sealer. Recognize that any surface preparation short of total removal of the old coating may compromise the service length of the system.

Iron & Steel - Minimum surface preparation is Hand Tool Clean per SSPC-SP2. Remove all oil and grease from surface per SSPC-SP1. For better performance, use Commercial Blast Cleaning per SSPC-SP6. Primer recommended for best performance. Prime any bare steel within 8 hours or before flash rusting occurs.

Aluminum - Remove all oil, grease, dirt, oxide and other foreign material per SSPC-SP1.

Galvanizing - Allow to weather a minimum of six months prior to coating. Solvent Clean per SSPC-SP1. When weathering is not possible, or the surface has been treated with chromates or silicates, first Solvent Clean per SSPC-SP1 and apply a test patch. Allow paint to dry at least one week before testing adhesion. If adhesion is poor, brush blasting per SSPC-SP16 is necessary to remove these treatments. Rusty galvanizing requires a minimum of Hand Tool Cleaning per SSPC-SP2; prime the area the same day as cleaned.

Concrete Block - Surface should be thoroughly clean and dry. Air, material and surface temperatures must be at least 50°F (10°C) before filling. Use Pro industrial Heavy Duty Block Filler or Loxon Acrylic Block Surfacer. The filler must be thoroughly dry before topcoating.

Masonry - All masonry must be free of dirt, oil, grease, loose paint, mortar, masonry dust, etc. Clean per SSPC-SP13-Nace 6-ICRI No. 310.2R, CSP 1-3. Pour, troweled, or tilt-up concrete, plaster, mortar, etc. must be thoroughly cured at least 30 days at 75°F. Form release compounds and curing membranes etc. must be thoroughly cured at least 30 days at 75°F. Clean spills, spatters, hands and tools immediately after use with soap and warm water. After cleaning, flush spray equipment with compliant cleanup solvent to prevent rusting of the equipment. Follow manufacturer’s safety recommendations when using solvents.

Before using, carefully read CAUTIONS on label. Refer to the Safety Data Sheets (SDS) before use.

FOR PROFESSIONAL USE ONLY.

Published technical data and instructions are subject to change without notice. Contact your Sherwin-Williams representative for additional technical data and instructions.

CLEANUP INFORMATION

Clean spills, spatters, hands and tools immediately after use with soap and warm water. After cleaning, flush spray equipment with compliant cleanup solvent to prevent rusting of the equipment. Follow manufacturer’s safety recommendations when using solvents.

The information and recommendations set forth in this Product Data Sheet are based upon tests conducted by or on behalf of The Sherwin-Williams Company. Such information and recommendations set forth herein are subject to change and pertain to the product offered at the time of publication. Consult your Sherwin-Williams representative or visit www.paintdocs.com to obtain the most current version of the PDS and/or an SDS.
