EXTREME BLOCK™
Stain Blocking Primer/Sealer

White B49W00600

CHARACTERISTICS

Color: White
Coverage: 350 - 400 sq ft/gal @ 4 mils wet; 2.2 mils dry

Drying Time, @ 50% RH, 77°F:
- Touch: 1 hour
- Recoat: 2 hours

Finish: Flat

Tinting: Blend-A-Color Toner only. For best color development, use the recommended "P"-shade primer. If desired, up to 4 oz per gallon of Blend-A-Color Toner can be used to approximate the topcoat color. Check color before use.

White: B49W00600
VOC (less exempt solvents): 338 g/L; 2.82 lb/gal
As per 40 CFR 59.406 and SOR/2009-264, s. 12
- Volume Solids: 55 ± 2%
- Weight Solids: 76 ± 2%
- Weight per Gallon: 11.98 lb
- Flash Point: 111°F, TCC
- Vehicle Type: Alkyd

SURFACE PREPARATION

WARNING! Removal of old paint by sanding, scraping or other means may generate dust or fumes that contain lead. Exposure to lead dust or fumes may cause brain damage or other adverse health effects, especially in children or pregnant women. Controlling exposure to lead or other hazardous substances requires the use of proper protective equipment, such as a properly fitted respirator (NIOSH approved) and proper containment and cleanup. For more information, call the National Lead Information Center at 1-800-424-LEAD (in US) or contact your local health authority.

Remove all surface contamination by washing with an appropriate cleaner, rinse thoroughly and allow to dry. Scrape and sand peeled or checked paint to a sound surface. Sand glossy surfaces dull. Recognize that any surface preparation short of total removal of the old coating may compromise the service length of the system.

Wood, Composition Board - Sand any exposed wood to a fresh surface. Patch all holes and imperfections with a wood filler or putty and sand smooth. Spot prime knots and sap streaks.

On woods that present potential tannin bleeding, such as redwood and cedar, Extreme Block Stain Blocking Primer/Sealer can be used. Care must be taken to determine if tannins will be activated by the solvent in the coating. To test for bleeding, coat a 4 foot by 4 foot section with the primer. If no bleeding is evident within 2 hours, proceed with complete priming. If bleeding occurs, use Exterior Latex Wood Primer.

### SURFACE PREPARATION

<table>
<thead>
<tr>
<th>Mildew</th>
<th>Drywall</th>
<th>Caulking</th>
</tr>
</thead>
<tbody>
<tr>
<td>Prior to attempting to remove mildew, it is always recommended to test any cleaner on a small, inconspicuous area prior to use.</td>
<td>Fill cracks and nail holes with patching paste/spackle and sand smooth. Joint compounds must be cured and sanded smooth. Remove all sanding dust.</td>
<td>Fill gaps between windows, doors, trim, and other through-wall openings with the appropriate caulk after priming the surface. Allow proper drying time before application of the primer.</td>
</tr>
<tr>
<td>Bleach and bleaching type cleaners may damage or discolor existing paint films. Bleach alternative cleaning solutions may be advised. Mildew may be removed before painting by washing with a solution of 1 part liquid bleach and 3 parts water. Apply the solution and scrub the mildewed area. Allow the solution to remain on the surface for 10 minutes. Rinse thoroughly with water and allow the surface to dry before painting. Wear protective eyewear, waterproof gloves, and protective clothing. Quickly wash off any of the mixture that comes in contact with your skin. Do not add detergents or ammonia to the bleach/water solution.</td>
<td>Thoroughly clean the surface before applying to smoke, fire or stained areas. After priming, allow to dry 1 hour, test a small area for bleeding by applying the topcoat before painting the entire project. If the stain bleeds through, apply a second coat of primer and allow to dry overnight and retest before topcoating.</td>
<td></td>
</tr>
<tr>
<td>Smoke, fire, or stain damaged areas—Thoroughly clean the surface before applying to smoke, fire or stained areas. After priming, allow to dry 1 hour, test a small area for bleeding by applying the topcoat before painting the entire project. If the stain bleeds through, apply a second coat of primer and allow to dry overnight and retest before topcoating.</td>
<td>Plaster Bare plaster must be cured and hard. Textured, soft, porous, or powdery plaster should be treated with a solution of 1 pint household vinegar to 1 gallon of water. Repeat until the surface is hard, rinse with clear water and allow to dry.</td>

### CAUTIONS

Review current SDS prior to use. Non-photochemically reactive. Not for use on horizontal surfaces, such as a roof, deck, or floor, or where water may collect.

Before using, carefully read **CAUTIONS** on label.

### CLEANUP INFORMATION

Clean spills, spatters, and tools immediately with a compliant cleanup solvent. Follow manufacturer's safety recommendations when using solvents.

**DANGER:** Rags, steel wool, other waste soaked with this product, and sanding residue may spontaneously catch fire if improperly discarded. Immediately place rags, steel wool, other waste soaked with this product, and sanding residue in a sealed, water-filled, metal container. Dispose of in accordance with local fire regulations.

The information and recommendations set forth in this Product Data Sheet are based upon tests conducted by or on behalf of The Sherwin-Williams Company. Such information and recommendations set forth herein are subject to change and pertain to the product offered at the time of publication. Consult your Sherwin-Williams representative or visit www.paintdocs.com to obtain the most current version of the PDS and/or an SDS.
