SuperPaint®
Exterior Latex High Gloss
A85-Series

CHARACTERISTICS

SuperPaint Exterior Latex, High Gloss, provides outstanding performance on properly prepared aluminum and vinyl siding, wood, hardboard, masonry, cement, brick, block, stucco, and metal.

VinylSafe™ paint colors allow you the freedom to choose from 100 color options, including a limited selection of darker colors formulated to resist warping or buckling when applied to a sound, stable vinyl substrate.

Recommended for:
• Doors
• Windows
• Trim
• Shutters

Excellent Performance in:
• Block Resistance
• Moisture Resistance
• Gloss Retention
• Flow and Leveling

Color: Most Colors
To optimize hide and color development, always use the recommended P-5 Shade primer.

Coverage: 350-400 sq. ft. per gallon
@ 4 mils wet, 1.5 mils dry

Drying Time, @ 50% RH:
@ 35-45°F @ 45°F +
Touch: 2 hours 2 hours
Recoat: 24-48 hours 4 hours

Drying and recoat times are temperature, humidity, and film thickness dependent.

Finish: 65+ units @ 60°

APPLICATION TIPS

Make sure product is completely agitated (mechanically or manually) before use.

Thoroughly follow the recommended surface preparations. Most coating failures are due to inadequate surface preparation or application. Thorough surface preparation will help provide long term protection.

SuperPaint Exterior Latex High Gloss sets up very quickly, providing painted surfaces which resists sticking together (blocking). When used at normal temperature and humidity, windows and doors can be closed after 4 hours drying. Maximum blocking resistance is achieved after 24 hours. With this benefit, some adjustments to your painting approach must be made.

Do not paint in direct sun. Temperatures over 80°F and humidity under 30% will make the paint set up quicker.

Do not over-work the product. Load paint on the surface, spread to cover, smooth out with long, even strokes. Finish this area before moving to a new area. Do not attempt to brush back into and further uniform an area once finished.

Work quickly to maintain a wet edge.

Paint objects in a vertical position to reduce the collection of airborne dirt and dust on the drying paint.

COMPLIANCE
As of 08/31/2020, Complies with:

- OTC
- OTC Phase II
- SCAQMD
- CARB
- CARB SCM 2007
- Canada
- LEED® v4 & v4.1 Emissions
- LEED® v4 & v4.1 VOC
- EPD-NSF Certified
- MIR-Manufacturer Inventory
- MPI®

APPLICATION

Apply at temperatures above 50°F.
No reduction necessary.

Brush: Use a nylon-polyester brush.
Roller: Use a high quality 1/4-3/4 inch nap synthetic roller cover.

For specific brushes and rollers, please refer to our Brush and Roller Guide on sherwin-williams.com

Spray—Airless
Pressure: 2000 p.s.i.
Tip: .015-.021 inch

SPECIFICATIONS

SuperPaint Exterior Latex can be self-priming when used directly over existing coatings, or bare drywall, plaster and masonry (with a cured pH of less than 9). The first coat acts like a coat of primer and the second coat provides the final appearance and performance. Please note that some specific surfaces require specialized treatment.

Use on these properly prepared surfaces:
- Aluminum & Aluminum Siding
- Galvanized Steel
- Concrete Block, CMU, Split face Block
- Brick, Stucco, Cement, Concrete
- Cement Composition Siding-Panel
- Plywood
- Plywood
- Wood (Cedar, Redwood)
- Wood (Cedar, Redwood)

VOC (less exempt solvents):

less than 50 grams per litre; 0.42 lbs. per gallon
As per 40 CFR 80.6

Volume Solids: 37 ± 2%
Weight Solids: 49 ± 2%
Weight per Gallon: 10.03 lbs
Flash Point: N/A
Vehicle Type: 100% Acrylic
Shelf Life: 36 months unopened

Mildew Resistant
This coating contains agents which inhibit the growth of mildew on the surface of this coating film.

SURFACE PREPARATION

WARNING! Removal of old paint by sanding, scraping or other means may generate dust or fumes that contain lead. Exposure to lead dust or fumes may cause brain damage or other adverse health effects, especially in children or pregnant women. Controlling exposure to lead or other hazardous substances requires the use of proper protective equipment, such as a properly fitted respirator (NIOSH approved) and proper containment and cleanup. For more information, call the National Lead Information Center at 1-800-424-LEAD (in US) or contact your local health authority.

Remove all surface contamination by washing with an appropriate cleaner, rinse thoroughly and allow to dry. Existing peeled or checked paint should be scraped and sanded to a sound surface. Glossy surfaces should be sanded dull. Stains from water, smoke, ink, pencil, grease, etc. should be sealed with the appropriate primer-sealer. Recognize that any surface preparation short of total removal of the old coating may compromise the service length of the system.

Aluminum and Galvanized Steel:
Wash to remove any oil, grease, or other surface contamination. All corrosion must be removed with sandpaper, wire brush, or other abrading method.

Concrete & Masonry Primer.
If the pH is higher than 9, prime with Loxon Concrete & Masonry Primer.

Steel:
Rust and mill scale must be removed using the appropriate caulk after priming the surface.

Cement Composition Siding-Panels:
Remove all dirt, dust, grease, oil, loose particles, laitance, foreign material, and peeling or defective coatings. Allow the surface to dry thoroughly. If the surface is new, test its pH if the pH is higher than 9, prime with Loxon Concrete & Masonry Primer.

Stucco:
Remove any loose stucco, efflorescence, or laitance. Allow new stucco to cure at least 30 days before painting. If painting cannot wait 30 days, allow the surface to dry 7 days and prime the surface with Loxon Concrete & Masonry Primer/Sealer. Cracks, voids, and other holes should be repaired with an elastomeric patch or sealant. Concrete masonry units (CMU) - Surface should be thoroughly cleaned and dry. Air, material and surface temperatures must be at least 50°F (10°C) before filling. Use Loxon Acrylic Block Surfacer. The filler must be thoroughly dry before topcoating.

Previously Painted Surfaces:
If in sound condition, clean the surface of all foreign material. Smooth, hard or glossy coatings and surfaces should be dulled by abrading the surface. Apply a test area, allowing paint to dry one week before testing adhesion. If adhesion is poor, additional abrasion of the surface and/or removal of the previous coating may be necessary. Re-test surface for adhesion. If paint is peeling or badly weathered, clean surface to sound substrate and treat as a new surface as above. Recognize that any surface preparation short of total removal of the old coating may compromise the service length of the system.

Mildew:
Prior to attempting to remove mildew, it is always recommended to test any cleaner on a small, inconspicuous area prior to use. Bleach and bleaching type cleaners may damage or discolor existing paint films. Bleach alternative cleaning solutions may be advised.

Mildew may be removed before painting by washing with a solution of 1 part liquid bleach and 3 parts water. Apply the solution and scrub the mildewed area. Allow the solution to remain on the surface for 10 minutes. Rinse thoroughly with water and allow the surface to dry before painting. Wear protective eyewear, impermeable gloves, and protective clothing. Quickly wash off any of the mixture that comes in contact with your skin. Do not add detergents or ammonia to the bleach-water solution.

Wood, Plywood, Composition Board:
Clean the surface thoroughly then sand any exposed wood to a fresh surface. Patch all holes and imperfections with a wood filler or putty and sand smooth. All new and patched areas must be primed. Knots and some woods, such as redwood and cedar, contain a high amount of tannin, a colored wood extract. If applied to these bare woods, it may show some staining. If staining persists, spot prime severe areas with 1 coat of Exterior Oil-Based Wood Primer prior to using.

Stucco:
Remove any loose stucco, efflorescence, or laitance. Allow new stucco to cure at least 30 days before painting. If painting cannot wait 30 days, allow the surface to dry 7 days and prime with Loxon Concrete & Masonry Primer.

“Vinyl or other PVC Building Products:
Clean the surface thoroughly by scrubbing with warm, soapy water. Rinse thoroughly, if needed prime with appropriate white primer. Do not paint vinyl with any color darker than the original color or having a Light Reflective Value (LRV) of less than 56 unless VinylSafe® Colors are used. If VinylSafe colors are not used the vinyl may warp. Follow all painting guidelines of the vinyl manufacturer when painting. Only paint properly installed vinyl siding. Deviating from the manufacturer’s painting guidelines may cause the warranty to be voided.

CLEANUP INFORMATION

Clean spills, spatters, hands and tools immediately after use with soap and warm water. After cleaning, flush spray equipment with compliant cleanup solvent to prevent rusting of the equipment. Follow manufacturer’s safety recommendations when using solvents.

The information and recommendations set forth in this Product Data Sheet are based upon tests conducted by or on behalf of The Sherwin-Williams Company. Such information and recommendations set forth herein are subject to change and pertain to the product offered at the time of publication. Consult your Sherwin-Williams representative or visit www.paintdocs.com to obtain the most current version of the PDS and/or an SDS.
